

1766. Confirmation of time lag in effect: each day ¾ of normal

Monday, May 25, 2020

In the previous article I detailed how the use of my own body as a measuring instrument, suggested that the current time lag is now as high as 6 hours per day, thus making the length of each day only 18 hours, versus the natural period of rotation of the earth which is 24 hours. This observational evidence then allowed me to estimate the time of the rapture as not being likely until May 31st 2020 [Article 1765: Rapture not likely until May 31st 2020]. Now under my video on Article 1765, a comment was left which confirms my own observations regarding the current time lag in effect and actually describes how birds are no longer active in the morning as they used to be and sometimes chirping at 2:00 am

Figure 1. Birds are described by Chloe in a comment under my video as behaving in a way which is consistent with the huge time lag which I have personally observed.

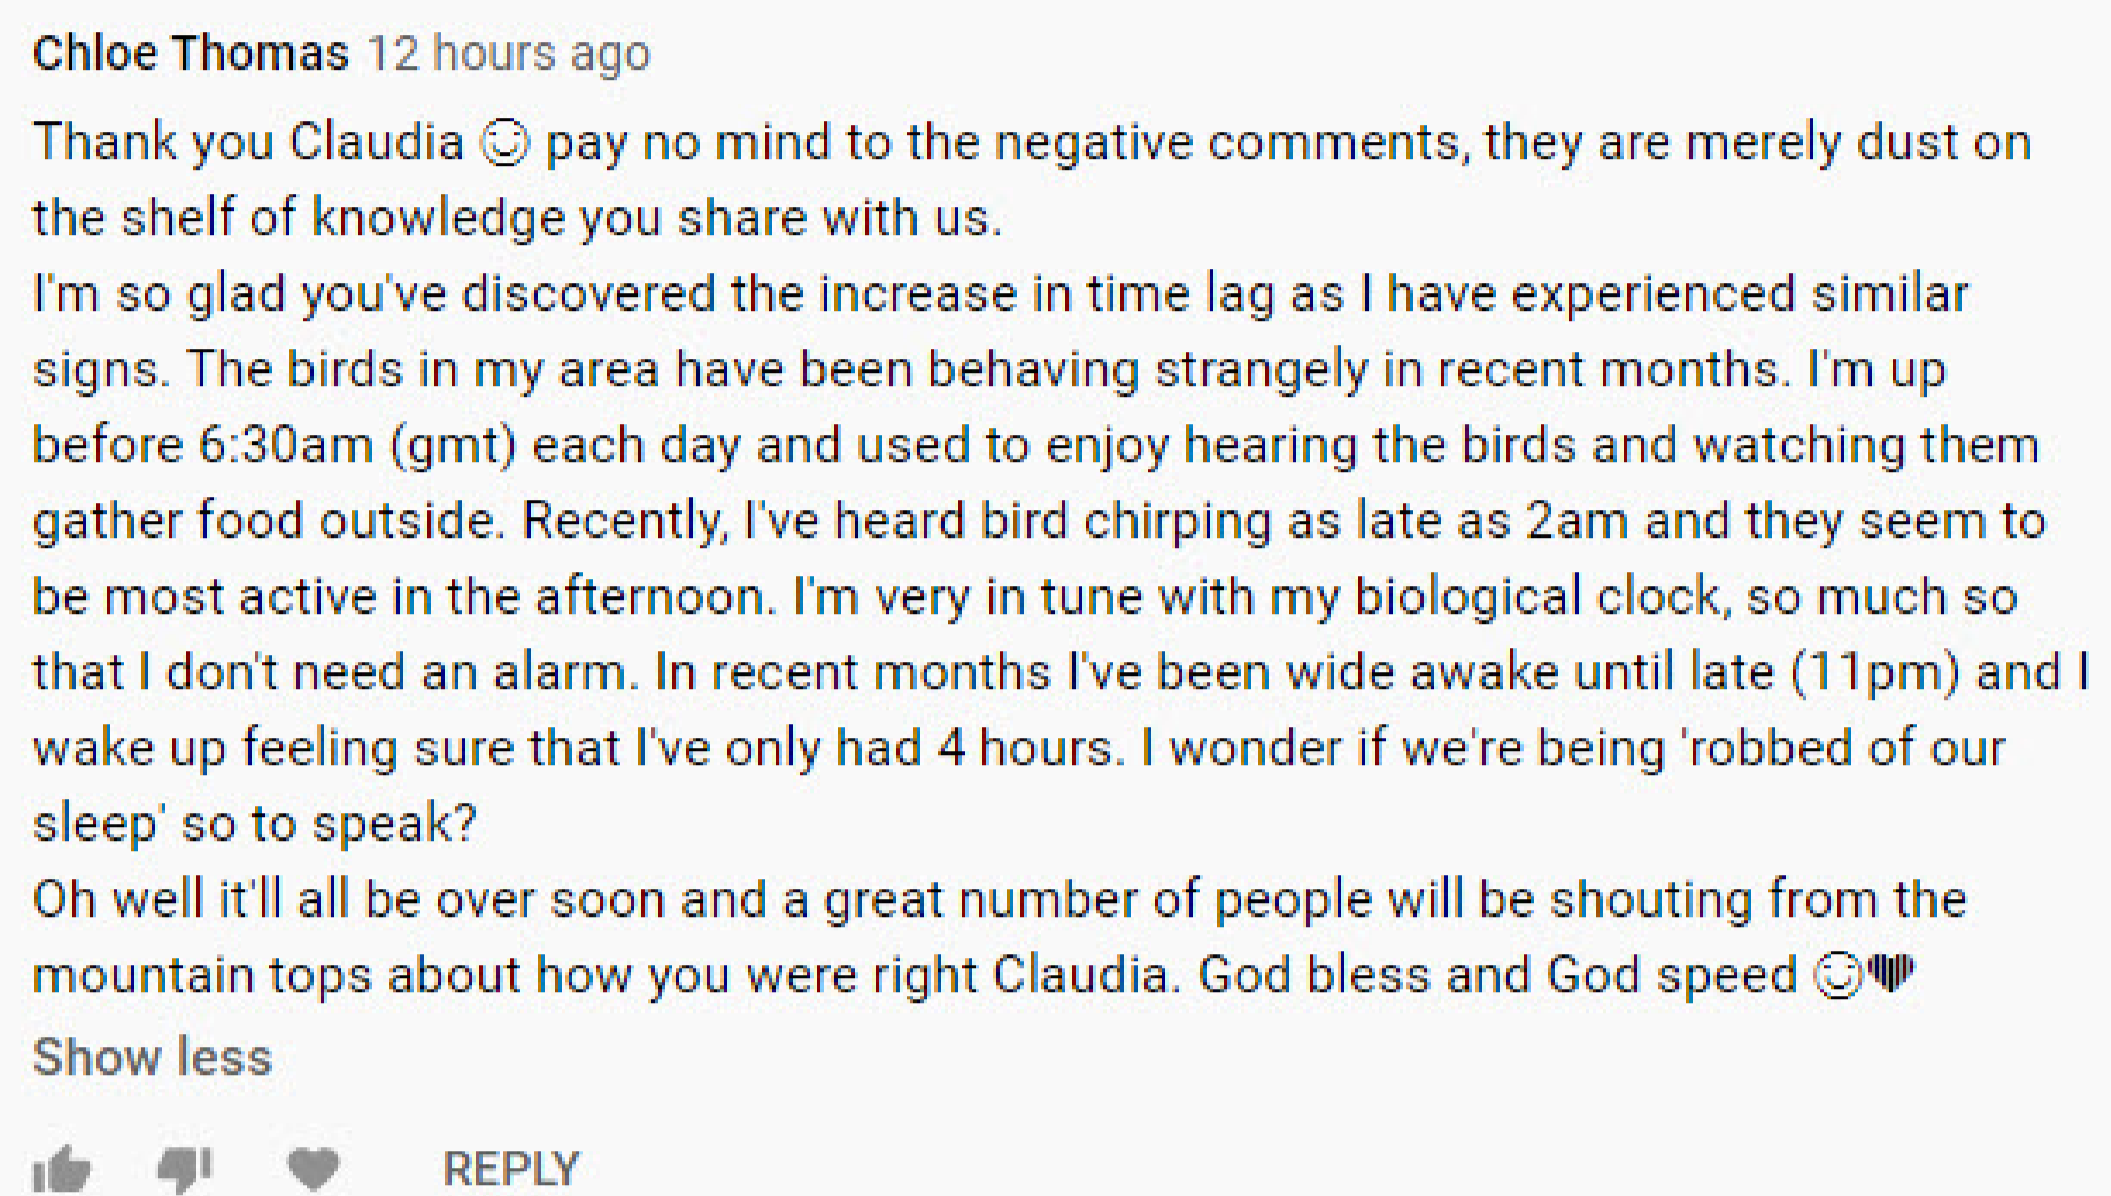

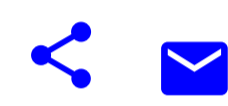

Figure 2. Encouraging comment left by Chloe: Thank you, Chloe. Chloe confirms my findings about the time lag that is now in effect. She states that she often feels she has only slept for 4 hours, which is exactly what would be expected, as with a 6 hour time lag, the day is only ¾ as long as it was before, so the night is 3 hours shorter than normal and so is the day.

In conclusion, a comment left under the video on the previous article offers confirmation of the time lag that is now in effect on earth which seems to be of 6 hours, thus making each day only 18 hours long, and would thus be expected to cause birds to start out their day much later and sometimes chirp late into the night, which is what has been observed.

As I have shown in previous articles, the Sun seems to have stopped emitting light by 2001, and the earth now has a whole array of sun simulation devices that have replaced the real sun in its skies [Playlist: The Sun has gone dark and simulation devices]. In addition, daylight is actually produced b ...
